SAFE care, closer to home

Standardised pathways

Appropriate training

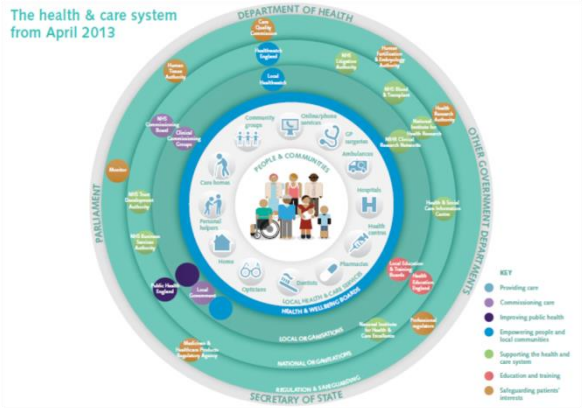
Framework for safety netting

Evaluation and benchmarking

Standardised pathways

- Based on a tried, tested and evidence-based methodology "Manchester Triage System" and adapted for primary care and the community setting by an expert working group
- Locally applicable using the "Presentation Priority Matrix" methodology and a DELPHI engine

Context



Health and Social Care system from April 2013
Source: Department of Health, June 2014 (updated September 2013)

Appropriate training

SAFE pathways courses for primary care	Training carers teaching package as part of SAFE pathways courses and ALSG courses in acute domain	Emergencies courses for acute and secondary care	Community courses

Framework for safety netting

In collaboration with ASK SNIFF development of:

- Training packages for parents and carers
- Advice assets
- Framework for communication of parent/carer 'handover'

ASK SNIFF
Acutely Sick Kid Safety Netting Interventions for Families

Programme modular and streamed

Core modules [2.5 hours] + 1 stream [5 hours] (see below)
[Certificate: SAFE Pathways: core]

Stream 1:	Stream 2:	Stream 3:	Stream 4:	Stream 5:
CYP structured approach and simulations [Certificate: SAFE Pathways: CYP]	AM structured approach and simulations [Certificate: SAFE Pathways: AM]	Obs structured approach and simulations [Certificate: SAFE Pathways: Obs]	MH structured approach and simulations [Certificate: SAFE Pathways: MH]	Trach structured approach and simulations [Certificate: SAFE Pathways: Trach]

All elements to be embedded and linked to courses for healthcare workers in acute, secondary, primary and community care

Evaluation and benchmarking

SAFE will provide:

- A recognised standard and quality assured structure with on-going evaluation and review included at all stages …
- … supporting benchmarking at all levels
